

**Dewatering Screens**/PU dewatering Panel has excellent wear resistance, oil resistance, acid and alkali resistance, light weight and convenient installation. The common Fastening System includes Rail /Clipper type, Snap Type, Pin type, Pin & Sleeve type, etc.

**Fastening System:** Rail /Clipper type, Snap Type, Pin type, Pin & Sleeve type and so on.

The standard panel sizes available at 305 \*305, 305 \*610, 610 \*610, and customized size as per customer request, with slot width $\geq$ 1mm.

Polyurethane dewatering screen is a sieve for the sieve plate, mainly used for material dehydration or fine particles of the material screening. Dewatering Screen panels also are known as slot pu screen plate, tailings dewatering screen panel. As the shape of the dehydration sieve plate are generally small, it is also known as the modular screen panels...

**The structure of the dewatering screen panels:**

The pu screen decks are made of the polyurethane material with the metal welded framework inside. So that the polyurethane sieve plate is durable.

**Polyurethane Dewatering Screen has following applications:**

dehydration sieve plate is widely applied to screening plant, Tailings dewatering, concentrate dewatering, sandstone, mine dewatering sieve plate, coal slime dewatering sieve plate, tailings dewatering sieve plate, sand dehydrated sieve plate, sand vibrating screen, dehydration sieve plate and so on.
